Experience

Independent consultant in AI and software development

Jan 2025 – Current

- Develop generative AI projects (multi-agent RAG systems, image generation in ComfyUI).
- Design, fine-tune, and deploy ML models (LoRA for diffusion image generation models).
- Build full-stack applications in Python, C#, and React, and orchestrate deployment on Azure.

Universidad San Jorge de Zaragoza

Sep 2025 – Current

Programming for data science & Web systems professor

Zaragoza, Spain

- Design and teach programming for data science and web systems courses, managing all content, delivery, and assessments.

Universidad Carlos III de Madrid

Feb 2024 – Jul 2024

Language processors professor

Madrid, Spain

- Taught and evaluated over 80 students through practical sessions covering all essential stages of compiler construction, focusing on developing a C-to-Lisp and Lisp-to-Forth transpiler using Bison and C.
- Received a Teaching Excellence Acknowledgment with a 4.13/5 student evaluation score.
- My students achieved a 94% pass rate, contributing to a 76% overall pass rate.

ATRIA Innovation

Feb 2023 – Apr 2023

Software Engineer Intern

Zaragoza, Spain

- Contributed to the development of a Python program that employs Convolutional Neural Networks for the detection of manufacturing issues in car images.

Education

Universidad Carlos III de Madrid

Sep 2023 – Sep 2025

Double Master Degree in Computer Science and Applied Artificial Intelligence

Madrid, Spain

Universidad de Zaragoza

Sep 2019 – Jun 2023

Bachelor's degree in Computer Science

Zaragoza, Spain

George Mason University

Aug 2022 – Dec 2022

Bachelor's degree in Computer Science

Fairfax, Virginia

Skills

- C++ | Go | Python | JavaScript | TypeScript | React | NodeJS | Kotlin | Algorithm Design and Analysis | Data Structures
- Git | GitHub | Docker | Kubernetes | Google Cloud | Distributed Systems | Database Management | SQL
- Linux | Computer Architecture | Machine Learning | AI | Spanish (Native) | English (Fluent) | German (Intermediate)

Projects

LOL E-Sports Bets | Kotlin, Go, Android, Google Cloud

- Developed an Android application in Kotlin for virtual betting on League of Legends eSports, supported by a Go backend server that manages real-time bets.
- Orchestrated the cloud infrastructure on Google Cloud Platform (Compute Engine and Cloud SQL).

March Machine Learning Mania 2024 | Python, Machine Learning

- Developed a predictive model to accurately estimate the outcomes of NCAA basketball tournament games for the Kaggle competition "March Machine Learning Mania 2024."
- Conducted comparative analysis of machine learning techniques, including XGBoost and neural networks.

Activities & Leadership

Applied Artificial Intelligence Group, UC3M

Sep 2023 – Sep 2025

Research Member

Madrid, Spain

- Contributed to a research project alongside faculty, leading to the publication of the article "Cloud-based System for Monitoring Event-Based Hydrological Processes Using a Dense Sensor Network and NB-IoT Connectivity."

ZAMUN (Žilina Model United Nations)

2019

Participant

Žilina, Slovakia

- Took part in the international debate program promoted by the UN, representing Brazil in the topic "Economic Instability and the Protection of the Environment" and "Asymmetric warfare on the Internet".
